

# HRIS

## Human Resource & Attendance Management System

### Complete Feature Overview

BizFlow HRIS replaces spreadsheets, paper registers, and manual approvals with one connected system for managing your people — from the moment they walk through the door in the morning to the day their payslip is generated. Two things set it apart from ordinary HR software: an AI assistant that answers questions about your workforce instantly, and attendance that logs itself automatically using location, with no one needing to touch a punch clock. This document covers everything the system does, in plain language.

#### What's included at a glance

|                          |                                                                          |
|--------------------------|--------------------------------------------------------------------------|
| AI HR Assistant          | Ask questions about your workforce in plain English, get instant answers |
| Automatic Geo-Attendance | Staff are punched in/out automatically by location — no device to tap    |
| Attendance & Shifts      | Punch processing, self-service requests, shift rosters, bulk uploads     |
| Leave Management         | Applications, approvals, balances, policies, encashment                  |
| Payroll & Salary         | Configurable salary structures and full payroll processing               |
| Employee Loans           | Loan issuance, installment tracking, early settlement                    |
| Assets                   | Track company property issued to and returned by staff                   |
| Onboarding & Checklists  | Structured preboarding with step-by-step checklists                      |
| Reports & Dashboard      | Live KPIs plus a full library of exportable HR reports                   |
| Roles & Permissions      | Fine-grained, per-action access control for every user                   |

## 1. AI HR Assistant

*Instead of digging through menus and filters to find an answer, just ask for it.*

BizFlow has a built-in AI assistant, available right inside the app, that understands plain-language questions about your workforce and answers them instantly by looking up your live HR data — no reports to run, no filters to configure.

- **Understands natural language** — No special commands or search syntax — employees and HR staff can ask questions exactly the way they'd ask a colleague.
- **Answers from real, live data** — Every answer is pulled directly from your current HR records — attendance, leave, payroll, assets, and more — so it's always accurate and up to date.
- **Wide range of built-in knowledge** — The assistant can check who's present, absent, late, or on leave; look up an employee's leave balance, salary, or assigned assets; find new joiners; check pending leave requests; search company policies; and much more.
- **Remembers the conversation** — Follow-up questions work naturally within a session — you don't have to repeat context you've already given.
- **Understands dates the way people write them** — Ask about "today," "this week," or a specific date, and the assistant correctly resolves it and confirms the date back to you.

- **Private to your business** — The assistant only ever answers using your own company's data — never mixed with any other business using the platform.

## 2. Automatic Attendance with Location Tracking

---

*The single biggest time-saver in BizFlow: attendance that takes care of itself.*

Most systems still require an employee to tap a card, scan a fingerprint, or press a button to record attendance. BizFlow removes that step entirely. Once set up, employees are automatically checked in the moment they arrive at the workplace, and automatically checked out the moment they leave — with zero action required from them.

### How it works

- **Set your office boundary:** For each office or work site, define its location on a map along with a radius — this creates an invisible boundary (a "geofence") around the workplace.
  - **Assign employees to a location:** Each employee is linked to the office location (or locations) where they're expected to work, with support for reassigning them over time as needed.
  - **Automatic detection:** As an employee's phone reports its location, BizFlow checks whether they are currently inside or outside their assigned office boundary.
  - **Hands-free punch in/out:** The moment an employee crosses into the boundary, they're automatically marked "in." The moment they leave it, they're automatically marked "out" — no card, no button, no app to open.
  - **Smart, not spammy:** The system only records a new punch when the employee's status actually changes (entering or leaving) — it won't create duplicate or unnecessary records while someone is simply staying at their desk.
  - **Identified securely:** Each employee is matched to their own record automatically, so attendance is always attributed to the right person.
- **Works alongside traditional methods** — Geofenced auto-attendance can be used on its own or side-by-side with device-based punches and manual entry, giving you flexibility across different roles or sites.
  - **Full audit trail** — Every automatic punch is logged with the source clearly marked, so HR can always see exactly how each attendance record was created.

## 3. Attendance & Shift Management

---

*Everything needed to process, review, and manage attendance beyond the automatic system above.*

- **Automated attendance processing** — Raw punch times are automatically checked against each employee's shift rules, producing a finished attendance status — such as Present, Late, or Half Day — without manual calculation.
- **Overtime calculated automatically** — The system works out both gross and net overtime for each employee based on actual punch times and shift schedules.
- **Bulk attendance upload** — For sites still using external punch devices, HR can upload attendance in bulk from a spreadsheet, using a ready-made template — the system validates and processes every row automatically.

- **Employee self-service requests** — Employees can submit their own attendance requests (for example, a missed punch) through a dedicated request page.
- **Two-stage approval workflow** — Attendance requests go through both HR and the employee's reporting authority before being accepted, with controls to prevent duplicate or repeated re-submissions.
- **Shift scheduling & rostering** — Assign shifts to individual employees or entire departments in bulk, define working-day rules per shift, and generate detailed shift reports.
- **Daily and individual attendance reports** — View attendance for a single day across the company, or a full attendance history for one specific employee, complete with summary totals.
- **One-click Excel export** — Any attendance report can be exported to Excel instantly for record-keeping, payroll input, or sharing with management.

## 4. Leave Management

---

*A complete, paperless leave process from request to approval.*

- **Leave applications** — Employees submit leave requests directly in the system, with the number of days calculated automatically based on the dates selected.
- **Approval workflow** — Leave requests are routed for approval, keeping a clear record of who requested what, and who approved it and when.
- **Configurable leave policies** — Set up leave types and policies that match your company's actual rules — different allowances, carry-over rules, and entitlements per leave type.
- **Leave balances** — Every employee's remaining leave balance, by type, is tracked automatically and visible at a glance — no manual ledger needed.
- **Leave encashment** — Support for employees cashing out unused leave, tracked and processed within the same system.
- **Leave ledger & balance reports** — Company-wide reports showing every employee's leave balance and complete leave history.

## 5. Payroll & Salary Management

---

*Flexible enough to match how your company actually structures pay.*

- **Configurable salary structures** — Build salary structures from individual components (basic pay, allowances, deductions, etc.), each with its own calculation method.
- **Full payroll processing** — Run payroll for your whole company with salary components, attendance, and leave all feeding into the calculation.
- **Salary status tracking** — See at a glance which employees have been paid this month and which are still pending.
- **Salary reports** — Generate detailed salary reports for record-keeping, audits, or management review.

## 6. Employee Loans

---

*Handle staff loans and salary advances without leaving the system.*

- **Loan issuance** — Record a loan given to an employee, with the repayment plan tracked from day one.
- **Automatic installment tracking** — Loan repayments are tracked installment by installment, integrated with payroll.
- **Flexible repayment handling** — Skip an installment when needed, or let an employee settle the full remaining balance early.

## 7. Asset Management

---

*Know exactly what company property is out with which employee, at all times.*

- **Asset categories & inventory** — Organize company assets (laptops, phones, equipment, etc.) by category for easy tracking.
- **Issue & return tracking** — Record when an asset is issued to an employee and when it's returned, building a complete transaction history per item.
- **Current holder at a glance** — Instantly see who currently holds any given asset, and an employee's full list of assigned assets.

## 8. Onboarding & Preboarding

---

*Bring new hires on board with a consistent, repeatable process.*

- **Preboarding workflow** — Manage new employees through the preboarding stage before they're fully onboarded into the system.
- **Structured checklists** — Build step-by-step onboarding checklists so nothing gets missed — documentation, equipment setup, introductions, and more — with progress tracked per new hire.
- **Bulk CSV import** — Bring in existing employee or attendance data in bulk via CSV import, rather than entering everything by hand.

## 9. Company & Organizational Structure

---

*Model your business exactly as it's structured, however many layers that involves.*

- **Multi-level structure** — Organize your business by company, business unit, division, and department, matching your actual reporting lines.
- **Designations & employment types** — Define job titles and employment types (e.g. full-time, contract) to classify your workforce accurately.
- **Multiple office locations** — Manage as many physical office or work-site locations as your business operates, each with its own settings.
- **Weekday & working-day configuration** — Set which days of the week are working days, feeding directly into shift and attendance calculations.

## 10. Holidays, Notices & Company Policies

---

- **Holiday calendar** — A visual, month-by-month calendar of company holidays, color-coded by holiday type, so everyone knows upcoming days off.
- **Company notice board** — Post company-wide announcements and notices that all employees can see in one place.
- **In-app notifications** — Keep employees and HR informed of relevant updates and approvals as they happen.
- **Versioned company policy documents** — Maintain company policy documents by year, with only one active version per year — and the AI assistant can search across them to answer policy questions directly.

## 11. Dashboard & Reporting

---

*Live numbers for daily management, plus a full library of formal reports when you need the detail.*

### Live dashboard

- **Headcount overview:** Total employee headcount, broken down by department.
- **Attendance summary:** Who's present, absent, late, or on leave today, at a glance.
- **Late & early-out summary:** Track patterns of lateness and early departures across the company.
- **Leave summary:** A live view of leave usage and balances across the organization.
- **Salary status:** See payroll completion status for the current period.
- **Loan summary:** An overview of active employee loans and outstanding balances.

### Formal reports

- **Employee activity report:** A full history of key actions and changes for an employee record.
- **Attendance & shift reports:** Daily attendance, individual attendance summaries, and shift-by-shift reporting.
- **Salary & leave reports:** Detailed salary runs and complete leave ledgers, ready to export.
- **Excel export everywhere:** Every major report can be exported to Excel with one click for sharing or record-keeping.

## 12. Security, Roles & Access Control

---

*Precise control over who can see and do what — down to individual actions, not just broad job titles.*

| Capability               | What it means for you                                                                                                                                  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Custom roles             | Create as many roles as your organization needs (HR, Manager, Payroll Officer, etc.) rather than being limited to a fixed set.                         |
| Fine-grained permissions | Every action in the system — viewing attendance, editing a punch, approving leave, and dozens more — can be individually granted or withheld per role. |
| Secure authentication    | Staff log in with secure, token-based authentication, keeping accounts and sessions protected.                                                         |

|                                       |                                                                                                    |
|---------------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Multi-company / tenant support</b> | If you manage more than one company or client, each one's data is kept fully separate and private. |
|---------------------------------------|----------------------------------------------------------------------------------------------------|

- **Full attendance audit trail** — Every attendance record — however it was created (manual, bulk upload, or automatic geo-punch) — is traceable back to its source.

---

*Thank you for considering BizFlow HRIS for your business.*
